DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group VII (Claim 16) in the reply filed on 04/19/2010 is acknowledged.
2. Claims 1-15 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Groups I-VI, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 04/19/2010.

Claim Rejections - 35 USC § 112

The following is a quotation of the **second paragraph** of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim **16** is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The limitation of Claim **16** "...observing ***the moving velocity***, on the detection screen, ***of the test pattern image thus captured...***" is not clear.

Does "...observing ***the moving velocity***, on the detection screen, ***of the test pattern image thus captured...***" mean

to determine *the moving velocity of the test pattern image* or

to capture *the test pattern image*?

The above limitation is not only contrary but also redundant to *Step (1)* because respectively:

"...*the test pattern* is moved... at a *predetermined velocity*..." and

"...*capture an image* of the *test pattern*..."

To further advance prosecution, the Examiner interprets "...observing *the moving velocity*, on the detection screen, *of the test pattern image thus captured*..." as "...observing *the moving velocity*...".

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim **16** is rejected under 35 U.S.C. 102(b) as being anticipated by **KANAZAWA et al. (JP 2001054147 (already of record))**.

Regarding Claim **16**, **KANAZAWA et al.** teach a screen motion image quality measuring/evaluating method of measuring and evaluating, based on the movement of a test pattern displayed on the screen of a display device to be evaluated,

the quality of a motion image on the screen ([0001], [0016], DWG. 1), the method comprising the steps of:

(1) capturing an image of the test pattern more than once ([0024], DWGs. 3a-3c) while the test pattern is moved ([0022], DWG. 2, i.e. 20) on the screen ([0022], DWG. 2, i.e. 2a) at a predetermined velocity ([0022], [0023], DWG. 2, i.e. "...the picture is moving continuously at a constant speed...") and while the visual field ([0022], DWG. 2, i.e. 2a) of an image sensor ([0019], DWG. 1, i.e. 5) is fixed ([0022], DWG. 2, i.e. 20);

(2) observing the moving velocity, on the detection screen, of the test pattern image thus captured ([0026], DWG. 1, i.e. "... (picture 20) ...inputted into the picture sensing device 5..."); and

(3) calculating and determining the moving velocity of the image sensor visual field ([0026], DWG. 1, i.e. "...roll control signal C) corresponding to the moving velocity of the test pattern image on the detection screen ([0022], DWG. 2, i.e. 20), and evaluating the quality of a motion image on the screen based on the image of the test pattern captured at the velocity thus determined ([0045], DWG. 2).
